

# thermofoil

UNDERLAMINATE FOIL

100 + 150 w/m<sup>2</sup>

**Specifically designed** for use under laminate or engineered boards and is less than 1mm thick so no need to worry about height build up.

Thermofoil is available at 100w/m<sup>2</sup> and 150w/m<sup>2</sup> outputs to provide the right amount of power for your floor. It is not designed for use in wet areas, such as bathrooms or shower rooms.

Thermofoil comprises of 3 layers of polyester which encapsulate the copper bus bar and conductive heating strips creating an ultra thin heating system in outputs to suit the heating requirements of virtually any building.

Thermofoil comes pre-terminated for ease of installation, however if you do need to trim a length on site we offer the adaption kit to ensure correct re-termination.

**Please note that Thermofoil is not suitable for use in wet areas.**

### Bespoke manufacturing service

Our bespoke manufacturing service can provide Thermofoil mats to exact sizes as specified by you. Give us a call today to discuss your project with our friendly, knowledgeable team.

#### WHY THERMOFOIL?

- PRE-TERMINATED
- DOUBLE INSULATED
- ULTRA THIN
- NO WET TRADES

**Specifically designed** for use under laminate or engineered boards and is **less than 1mm thick** so no need to worry about height build up

Use of Thermofoil in a suspended floor application. Can also be applied to insulated screed substrates.

For Thermostats see page 26.

## Heat-Pak

**BEST SELLER!**

Heat-Pak is a free floating sub floor, specially designed for installation over foil floor heating systems. This is a one-of-a-kind system that provides a very stable sub floor on which all kinds of floor covering can be laid but remains 'floating' to allow for movement differential in the floor build up and adds only 7mm to the finished floor height. Especially suitable for strip vinyl finishes.

Heat-Pak is the solution for creating a level, highly stable sub floor in a minimum amount of time, giving you top quality results much faster. The very low heat resistance helps to guide the heat from the underfloor element and up through the floor. This helps to improve efficiency by providing an even spread of heat and preventing the formation of hot spots.

### Features at a glance

- COMES ON THE ROLL
- PRE-TERMINATED
- 3LM CONNECTION WIRE
- TESTED TO 2500V
- MINIMAL HEIGHT BUILD UP
- 10 YEAR NO QUIBBLE WARRANTY

### CAUTION!

ANY FURNITURE PLACED ON TOP OF A HEATED TIMBER, VINYL OR CARPET FLOOR FINISH MUST HAVE LEGS OR BUN FEET TO ALLOW AIR CIRCULATION AND HEAT DISSIPATION.
