

# thermomirror

MIRROR DE-STEAMING

**Mirrors are virtually** guaranteed to steam up when using bathrooms and showers due to the condensing effect of cold glass.

Now there is a clear solution: Thermomirror. No more need to wipe mirrors dry because Thermomirror is a superthin (0.4mm) behind mirror heating element, controlled by the light switch or our PIR movement sensor (stock no 5264).

**Other products you may need:**

**Stock no 5264 PIR Movement Sensor**

**Stock no 5320 Mirror Adhesive**

**Stock no 5322 Skeleton Gun**

**Very safe to use,** Thermomirror creates a steam-free mirror in any location, providing **clear visibility** when you need it most.
